DETAILED ACTION

Allowable Subject Matter

Claims 13-24 are allowed because the prior art fails to teach either singly or in combination an optical amplifier comprising an amplified-spontaneous-emission compensating circuit that compensates for an amplified-spontaneous-emission component contained in the output monitor signal, a gain-variation-level compensating circuit that calculates a target average setup gain that is determined based on a signal intensity of the input monitor signal, and a constant gain control circuit that performs a gain control based on an output signal from the amplified-spontaneous-emission compensating circuit and the target average setup gain regarding claim (13); an optical amplifier comprising a subtraction signal obtained by subtracting an amplified-spontaneous-emission component contained in the output monitor signal, and an offset component determined based on a signal intensity of the input monitor signal from the input monitor signal, and a constant gain control circuit that performs a gain control in such a manner that a ratio of the output monitor signal to the subtraction signal becomes identical to a target average setup gain determined based on the signal intensity of the input monitor signal regarding claim (22); a gain control performed in such a manner that a ratio of the output monitor signal to an output signal of the optical-level detecting unit becomes identical to a target average setup gain determined based on the signal intensity of the input monitor signal regarding claim (23); and a method controlling a gain of an optical amplifier comprising first calculating a first target average setup gain at a maximum input intensity in an input dynamic range of an input light, first

setting the gain of the optical amplifier to the first target average setup gain, second calculating a second target average setup gain at a minimum input intensity in the input dynamic range of the input light, second setting including setting the gain of the optical amplifier to the first target average setup gain under a condition of the maximum input intensity, and setting the gain of the optical amplifier to the second target average setup gain under a condition of the minimum input intensity, and third calculating including calculating a third target average setup gain at each input intensity in the input dynamic range of the input light regarding claim (24).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
